SUMMARY

Technical professional with a BS in Computer Science and graduate-level data science training in progress, transitioning into data analyst roles after 5 plus years of hands-on analytical work embedded within technical product management. Throughout my career I have built dashboards, analyzed conversion funnels, validated data quality, conducted root-cause analyses and translated complex data into stakeholder-facing narratives. This was work I did as a core part of my PM responsibilities rather than in a dedicated analyst title. Proficient in SQL, Python, R, Excel, Tableau, Power BI as well as hands-on experience using AI tools to accelerate analytical workflows. Comfortable working independently, managing multiple priorities and communicating findings clearly to both technical and non-technical audiences.

SKILLS

Programming and Query Languages: Python, R, SQL, JavaScript, Java

Data Analysis and Visualization: Tableau, Power BI, Looker, Google Analytics, Mixpanel, Heap, Excel (pivot tables, advanced formulas, filters, reconciliations), Statistical Analysis, A/B Testing, Funnel Analysis, Data Validation, Root-Cause Analysis, Trend Analysis

Data Platforms and Engineering Tools: Snowflake, Databricks, Pandas, NumPy, SciPy, Jupyter, GitHub

Business and Productivity Tools: Jira, Asana, Notion, Airtable, Lucidchart, Postman, Salesforce, Microsoft Suite, Google Suite

AI Tools: Claude, ChatGPT, GitHub Copilot, Cursor, NotebookLM

EDUCATION

University of California, San Diego | Bachelor of Science in Computer Science | June 2014

Eastern University | Master of Science in Data Science, part-time | Expected Fall 2026

RECENT PROJECTS

[E-Commerce Customer Satisfaction Analysis](#)

- Built an end-to-end e-commerce analysis in Power BI and Python, using Power Query, DAX and statistical analysis to identify the key drivers of customer satisfaction.

[California County Fiscal Trend Reliability Analysis](#)

- Designed and executed a SQL-driven analysis of 21 years of county financial data using a local SQLite database, applying window functions, CTEs, and custom statistical calculations.
- Built a signal-to-noise reliability ratio to distinguish genuine multi-year fiscal trends from statistical volatility, correcting an initial finding that was driven by small-county data noise.

PROFESSIONAL EXPERIENCE

Integrate | Product Manager | Aug 2021 - Oct 2023

- Built and maintained dashboards tracking user engagement, campaign performance, and funnel metrics, providing cross-functional stakeholders with consistent visibility into KPIs and operational performance.
- Analyzed end-to-end user journeys to identify conversion drop-off points and growth opportunities, translating complex data into clear narratives that informed product and marketing strategy.
- Conducted root-cause, gap, and trend analyses for data quality issues, documenting findings and sharing recommendations with product and engineering teams.
- Designed and analyzed A/B tests and user research studies to evaluate feature performance, applying statistical reasoning to drive iterative product improvements.
- Used Python, SQL, and Mixpanel to perform ad hoc data analysis, validate data quality, and support recurring reporting requests across cross-functional teams.
- Leveraged AI tools including Claude and ChatGPT to accelerate data validation, reporting workflows, and analytical output generation.
- Partnered with data science team to scope and execute AI and ML projects, translating model outputs into actionable stakeholder-facing recommendations.

Career Break | Personal Sabbatical | Nov 2023 - Feb 2025

- Graduate-level data science coursework including SQL, statistical modeling, data validation, and applied analysis in Python and R.
- Extended international travel and independent study.

Mt. Diablo Unified School District | Substitute Teacher, part-time | Mar 2025 - Present

- Part-time alongside graduate study and active career transition into data analytics.

Billups | Associate Technical Product Manager | Oct 2019 - Aug 2021

- Owned the audience and analytics product layer for an out-of-home campaign management platform, managing geospatial datasets including ESRI tapestry segmentation, Neustar, Census, and CARTO data.
- Used Pendo analytics and Excel to analyze user behavior, identify an over 18 percent platform drop-off rate, diagnose root causes, and drive a targeted initiative that improved retention to over 80 percent.
- Designed and implemented a data validation system ensuring data accuracy and completeness, reducing manual processing workload by approximately 20 percent per week through automated quality checks.
- Used SQL to query platform databases, perform reconciliations, and generate ad hoc reports supporting operational and stakeholder needs.
- Tracked and resolved data discrepancies, coordinating corrections and confirming updates were accurately reflected in downstream systems.

AppOnboard | Associate Technical Product Manager | Feb 2019 - Oct 2019

- Leveraged Mixpanel and Google Analytics to track user engagement, identify friction points, and drive iterative improvements that increased project completion rates by 12 percent.
- Compiled, summarized, and formatted data findings for review by leadership and cross-functional stakeholders.

- Maintained organized records and documentation supporting consistent data management practices across teams.

AppOnboard | Lead Technical Creative Engineer | Oct 2017 - Feb 2019

- Collaborated with product and engineering teams to define data requirements and maintain technical documentation and process guides.
- Built process diagrams using Lucidchart to document data flows and system requirements for cross-functional partners.
- Implemented data-driven process improvements that increased operational output efficiency by over 50 percent.
- Conducted systematic analysis to identify platform limitations and document analytical best practices for internal use.
- Served as primary point of contact for data issue resolution and escalation across all teams.

AdColony | Software Engineer | Feb 2015 - Jun 2017

- Built and maintained a front-end test framework using Java and Selenium, improving test coverage and release reliability across company products.
- Developed and maintained test case documentation and web portal features using Backbone.js and CoffeeScript.
- Collaborated with project teams to communicate technical details, diagnose issues, and deliver data-based solutions.
